

OpenReports Professional

OpenReports Professional is a powerful, flexible, and easy to use web reporting application. Built upon the foundation of OpenReports, the leading open source web reporting solution, OpenReports provides browser based, parameter driven, dynamic report generation and flexible report scheduling capabilities.

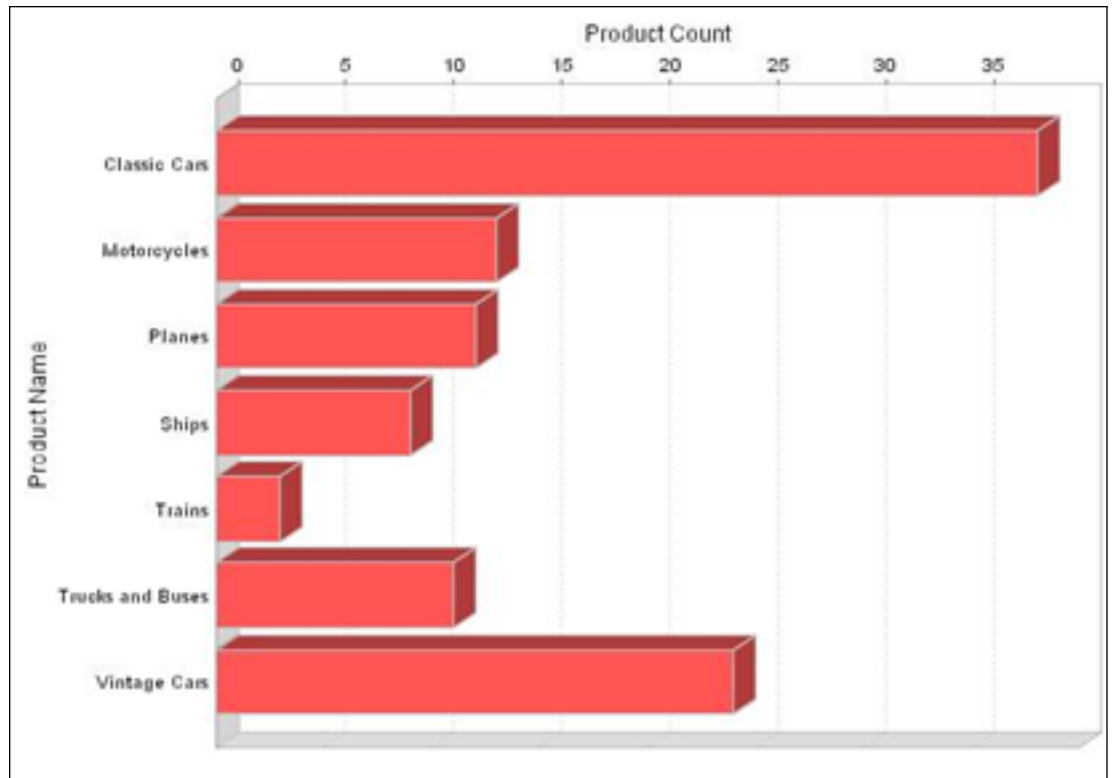

OpenReports features include:

Support for multiple reporting engines including JasperReports, JFreeReport, XJLS, and Eclipse BIRT

Report scheduling functionality including Hourly, Daily, Weekly, Monthly, and Cron scheduling, and multiple recipients.

Comprehensive Report Parameter support including Date, Text, List, Query, and Boolean parameters.

Much more including: a variety of export formats, a web administration console, report auditing, and a fine grained security model.

OpenReports Professional introduces enterprise functionality at an affordable pricepoint.

OpenReports Professional includes an Ajax enabled Reporting Dashboard which combines Alerts and a Dashboard report to provide

a single customized view of the information that is vital to the end user. Alerts are highlighted in red when triggered and can be associated with reports to facilitate quick drill-down capability.

Name	Condition	Value	Status	Report
Budget Variance Alert	< -250000	-440593	Passed	Regional Budget Variance
Motorcycle Inventory Alert	> 75000	69401	Failed	Product Line Inventory

User	Report	Description	Schedule	Next Run	State		
admin	Customer List with Credit Limit	Scheduled Via API	Weekly	09/27/2006 2:53 PM	Paused	Update	Remove
admin	Customer List with Credit Limit	Scheduled Via API	Weekly	09/29/2006 3:03 PM	Paused	Update	Remove
admin	Customer List with Credit Limit	Scheduled Online	Weekly	10/02/2006 3:03 PM	Normal	Update	Remove

Advanced scheduling features available in OpenReports Professional include Conditional Report Scheduling with Alerts and Global Scheduler Administration with View, Update, Delete, Pause, and Resume capability.

OpenReports Professional features a fine grained security model with the ability to control access to reports, alerts, the dashboard, scheduling, and admin functionality. All report generation and alert usage activity is tracked and available for monitoring via the Report Statistics Module. The Report Statistics Module allows administrators to report on activity by user, time period, or status.

17 items found, displaying 1 to 10.[First/Prev] 1, 2 [Next / Last]
